

SUMMARY

AI Engineer with 3 months of internship experience at a US-based financial firm, 2026 graduate Computer Science Engineer with hands-on experience in Python, data analysis, and in AI/ML Engineering workflows. Proven ability to analyze structured and unstructured data, document findings clearly, and deliver results in fast-paced, cross-functional environments. Strong logical thinking, attention to detail, and quick learning ability validated by a 98.03 percentile national ranking.

EDUCATION

- MBM University, Jodhpur**
Bachelor of Engineering, Computer Science

CGPA: 8.92/10
2022 – 2026
- Senior Secondary: 96.80% (scored 100 in Mathematics) | Secondary: 92.67% (scored 100 in Mathematics)

CERTIFICATIONS

- NCC Leader**: Lead the university NCC parade 2 times

2025
- Young Turks 25**– Naukri Campus: 98.03 percentile, ranked 155th in India

2025
- National Hackathon Winner**– COMSOC HACKX, Chandigarh University (Unstop)

2025
- Python Developer Certification**– Kaggle

2024

EXPERIENCE

- Springer Capital** (US-based Financial Firm)
AI- ML Engineer Intern –Software development

3-Month experience
June 2025 – August 2025
- Built a ML pipelines and RAG based AI systems on AWS, covering training, deployment of graph-based ML models.

– Developed LLM-based applications using Amazon Bedrock with prompt engineering, chaining, and evaluations; integrated with downstream services via async REST APIs.

– Implemented MLOps practices: model versioning, CI/CD pipelines, monitoring, automated rollback, and reproducibility across experimentation-to-production workflows.

– Developed RAG pipelines with vector embeddings and Pinecone DB; optimized inference cost and latency using batching and autoscaling on SageMaker endpoints.

– Collaborated cross-functionally among teams to translate AI use cases into scalable, cloud-native technical solutions.

PROJECTS

- AI Contract Analyzer** – *Multi-Agent RAG System | Python, Pytorch FastAPI, Langchain, Docker*

2026
- Built a contract analysis tool using multi-agent AI architecture, RAG pipelines, and LLM-based reasoning to extract clauses, flag risks, and answer legal questions over documents.

– Designed async microservice architecture with FastAPI; agents run concurrently using Python for parallel document processing, reducing analysis time by 60% and improve the performance of overall product.

– Integrated Hugging Face Transformers for document embeddings, Pinecone for vector search, and LangChain for agent orchestration and tool chaining — all containerized with Docker.
- Music Recommendation Application** *Personal Project*

2025
- Designed and developed a user friendly application to recommend music based on user preferences, mood input, and listening history, gain knowledge of recommendation algorithms and other machine learning algorithms.

– Built backend integration using REST APIs and PostgreSQL, neo4j; maintained code documentation and supported iterative feature enhancements.

SKILLS

- **Programming** : Python, SQL, Java (basic), APIs , REST, Backend development, Django
- **Data Analysis & AI** : Exploratory Data Analysis, Data cleaning, Pytorch, tensorflow, keras, Generative AI, Prompt engineering, Structured documentation, Technical report writing
- **Tools & Debugging**: Browser developer tools, website analysis tools, Git, Docker (basic), API, Jira ,AI tools, Copilot, AI assitant
- **Cloud & MLOps**: AWS (SageMaker, Bedrock, S3, IAM), Autoscaling, Model Versioning, Kubernetes, Ai agents, Inference Optimization
- **Databases**: PostgreSQL, SQL querying, Vector database (pinecone, Neo4j) data pipeline design
- **Soft Skills**: Strong analytical thinking, attention to detail, documentation, presentation, stakeholder communication, team collaboration, self-directed learning, Fast learner
- **Other**: Interest in building scalable AI platforms, intelligent applications, and data-driven solutions. AI skills for working with AI tools
